/ LaserGas[™] III SP Gas Analyzer

NEO Monitors LaserGas[™] III SP gas analyzer is a optical based Tunable Diode Laser Absorption Spectrometer (TDLAS), specifically designed for operation in certified hazardous areas and has been independently assessed as compatible for use in SIL2 installations. The analyzer consists of a transmitter and receiver unit that mount diametrically across the stack, duct, pipe or reactor vessel, eliminating the need for high maintenance sample conditioning systems. The analyzer provides near instantaneous on-line analysis with no cross interference to background gases.

Features

- Zone 1 Exd certified for operation in hazardous areas
- Suitable for use in SIL 2 systems
- Compact footprint
- Automatic continuous system health check
- Low power requirements <15 watts
- Factory calibrated with no zero drift
- No interference from other background gases
- Low maintenance TDLAS
 measurement technique

Applications

- Process Safety
- Inertization control
- FCC units
- Coke oven gas
- Combustion control
- Selective catalytic reduction (SCR)
- Selective non-catalytic reduction (SNCR)
- DeNOx
- Emission monitoring

Customer benefits

- Reliable and proven non-contact optical laser measurement technique
- NEO Monitors measurement algorithm ensures no crossinterference
- High measurement reliability
- Low ongoing cost of ownership and high return on investment (ROI)
- Very low maintenance

Specifications Response time:	1 second or longer	Relay output:	1 A at 30 VDC	Alignment tolerances:	Flanges parallel within 1.5°
